

Horndean Conservation Areas Butterfly News Letter 2015

This year's news letter, reflects Butterflies recorded in the Horndean Parish Conservation areas during 2015 from April 1st until September 30th. Butterflies are recorded using U.K. Butterfly Monitoring System T.W. On Line and results are forwarded to national Butterfly Conservation in Lulworth Dorset and also our local Hants & I.O.W. branch.

Butterflies have been recorded within the local nature reserves.

Catherington Down
Parsonage Field
Catherington Lith
The Holt
Windmill Hill (Blendworth & Horndean Down)
Hazelton Common
Dell Piece West

The following local volunteers undertook the butterfly transects

John Nundy (H.B.G. M.B.E.)
John & Mavis Vigay (H.B.G.)
Peter & Sylvia Leversha (H.B.G.)
Carole Burnett (Horndean Parish Ranger)
David & Valerie Strutt
David Phillips & Lucy Christopher
Shane & Sarah Dennis
Richard & Sandra Parkhurst
Chris Weeks
Chris Buckle
Roger Marriott (H.B.G. Transect Recorder)

Robins Pin Cushion (*Diplolesis Rosae*)
Hazelton Common September 2015

Adder (*Vipera Berus*)
Hazelton Common August 2015

2015 Season Summary

The season started with a decent number of Brimstones (*Gonepteryx Rhamni*) on the wing and recorded at all seven sites, along with over wintering Peacocks (*Aglais Io*) and Small Tortoiseshells (*Aglais Urticae*). All three of the above are up on last years count at most sites. Red Admirals (*Vanessa Atalanta*) and the Comma (*Polygonia C-Album*) also were more abundant than 2014. The first sign of spring in the butterfly world is the sight of the Orange Tip (*Anthocharis Cardamines*), Numbers were slightly lower on average than last year, Large Whites (*Pieris Brassicae*) and the Small White (*Pieris Rapae*) butterflies started very slowly but exploded with high numbers recorded in the summer second brood. Female Large Whites were of some considerable size this year, with a few aberrations seen at Catherington Down.

Holly Blues (*Celastrina Argiolus*) faired well with a nation wide increase of 151% from 2014. The parasitic wasp (*Listrodomus Nyctemerus*) relies totally on the larvae and when the numbers drop off the parasite drops off along with the larvae, hence the recovery of the Holly Blue can start. A record number of this beautiful insect were recorded at Catherington Lith and Windmill Hill the best since 2007

The Painted Lady (*Vanessa Cardui*), which was rumoured to be heading to the U.K. in vast numbers like 2009 did not show up as thought but numbers were again up from last year. The Common Blue (*Polymommatus Icarus*) was very late appearing this year, small numbers recorded early on but recovered in August and September at most sites. Catherington Down and Parsonage Field did not fair as well this year.

The Speckled Wood (*Parage Aegeria*) numbers averaged out much the same as last year with some sites doing better than others. The Grizzled Skipper (*Pyrgus Malvae*) was recorded at Catherington Down for the first time since 2012, only 4 were recorded but no doubt there were more, also the Dingy Skipper (*Erynnis Tages*) with a count of 7 four more than 2014. At last the Green Veined White (*Pieris Napi*) was recorded, numbers up this year.

The Small Heath (*Coenonympha Pamphilus*) 23 recorded in Transect two at The Holt but low numbers else where. Record numbers of Small Skippers were recorded but some were miss identified as Essex Skippers, which were also present. These two butterflies are infamously hard to tell apart in the field. Essex have black antennas on the under side and the small has all orange. Also the Essex is more of an olive colour and slightly smaller and the sex brands on the recto fore wing of the two male species are different. I will be pointing out how to tell them apart in the field, in the transect walkers pack 2016.

Large Skippers (*Thymelicus Sylvestis*) were much the same as 2014 but a record number were recorded at The Holt. A Meadow Brown (*Maniola Jurtina*) infestation took place this

year as they were everywhere, numbers were well up this season, again a few nice aberrations (*Maniola Jurtina Insularis*) were seen at The Holt.

A record number of Marbled Whites (*Melanargia Galathea*) were on the wing at all the sites in June with a record of 358 at Catherington Down. I recorded 166 on the 30th June at this site and it was a real spectacle, a really beautiful butterfly.

The Ringlet (*Aphantopus Hyperantus*) did not fair as well as 2014 and were not on the wing for very long. The illusive White Admiral (*Limenitis Camilla*) made his graceful appearance on the 3rd July at The Holt, I was lucky enough to photo a fresh male just out of pupation. Four were recorded, the best since 2011, lack of Honeysuckle and Bramble Flowers are probably responsible for this butterfly's decline at The Holt.

Silver Washed Fritillaries (*Argynnis Paphia*), 8 were recorded at Catherington Lith with a lone specimen at Dell Piece. The Holt gave a count of 66 the best since 2011 this butterfly has done well in recent years and does not totally rely on coppicing as other woodland Fritillaries do, numbers at The Holt ten years ago were double, hopefully they will pick up next year. Gatekeepers (*Maniola Jurtina*) were in abundance for a short while this year with record numbers recorded. 320 were seen at Catherington Down and record numbers at the other sites.

The Small Copper (*Lycaena Phlaeas*) numbers of this butterfly were generally better than last year with 6 being recorded at Catherington Down, it was also good to see this attractive little butterfly back at Dell Piece West, although in small numbers.

Three Clouded Yellows (*Colias Croceus*) were recorded this year slightly down on 2014. Specimens were seen at Windmill Hill, Parsonage Field and Dell Piece West. This fast flying migrant has not appeared on the south coast for a "Clouded Yellow Year" for a considerable time now maybe 2016 will be different.

Brown Argus (*Aricia Aegis*) Looks like this butterfly has taken a foot hold in the Horndean area, with 16 being recorded this year. 8 recorded at Windmill Hill and 5 at Dell Piece West is a massive increase from previous years but could have been recorded as a female Common Blue. Next year will tell us if it has bred in the area.

Small Blue (*Cupido Minimus*) has been very scarce in the past few years but 3 have been recorded this year. Parish council has plans to plant Kidney & Horseshoe Vetch at locations within the Parish boundaries to attract our smallest butterfly

Large Tortoiseshell (*Nymphalis Polychlorus*) this beautiful butterfly is thought to be extinct in the U.K. but I beg to differ. They keep on appearing along the south coast if only in small numbers and a single specimen seen at The Holt last year and in 2009 in the Pyle Lane area were recorded. I have not seen one since 1980 but I believe they migrate to the area and over winter. Mild winters were responsible for the demise of this species as the *Sturmia Bella* parasitic fly attacks the larvae in mild conditions. Cold winters could see this butterfly back on the south coast in decent numbers again.

Chalkhill Blue (*Polyommatus Coridon*) has not been recorded since 2013 when 5 were seen on Windmill Hill. This site seems made for this butterfly as it is in the same type of chalk down land as on Portsdown Hill.

The Green Hairstreak (*Callophrys Rubi*) has not been recorded since 2013 but unconfirmed positive I.D. suggests it was seen at Hazelton Common this year

(Pieridae) (Gonepteryx Rhamni) (Brimstone)
